

Job Shikari

An online job portal for both Recruiters and Employees

With beautifully designed User Interface and amazingly resourceful content, we bring to you Job Shikari!

A website that connects employees directly to the companies and interviewers to the best candidates.

Upload you own Curriculum Vitae or make your very own from our website and download it to use elsewhere!

Update your resume and also recruitment criteria whenever and wherever.

This site also will have a community where you can get best of the best tutorials uploaded by both companies and candidates for employers to learn and implement or upgrade their resume.

Unique features of our site:

1. You can upload your own C.V or make one using the help of our site and download it for elsewhere use.
2. You can send your C.V through online and apply for the company.
3. As a company you can get notified as to interested candidates and also be able to request other candidates to check out your package and work.
4. Employees can also use tutorials that have been uploaded by fellow employers and companies for usage in their fields.
5. The website shall award more points to those who upload videos and the companies will be given recommendations to choose ones with more points first.
6. Companies can upload their own tutorial videos or advertisement videos to attract candidates
7. The candidate can update his/her own resume whenever they upgrade their skill set.
8. Both companies and employers will be able to filter tags and apply for only those that are in the field they want.

Software development Life cycle:

Phase 1:

1. Design homepages for company and employee and link them
2. Create a page to allow user to input qualifications and then create his own CV and download it.
3. Create an about us page and link it.
4. Make a tutorial page and embed YouTube videos

Phase 2:

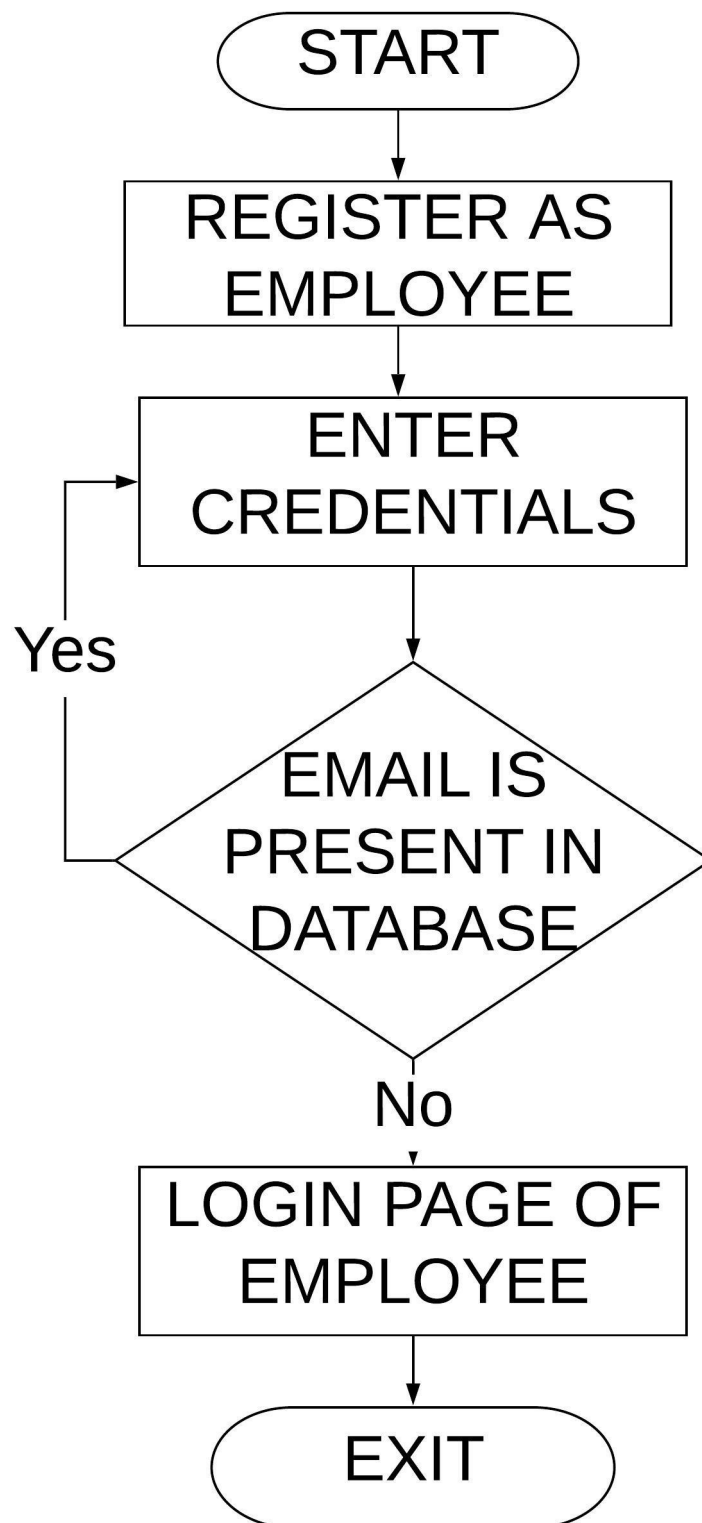

1. Create a database using SQL and integrate it with the website. That way we can update things real time.
2. Create tags so that the employee can use the button to search for jobs he is qualified for in Add jobs page and recruit page.
3. Design a search bar to be able to search keywords
4. Create a user profile and company profile page in the home pages to allow updating of information.

Phase 3:

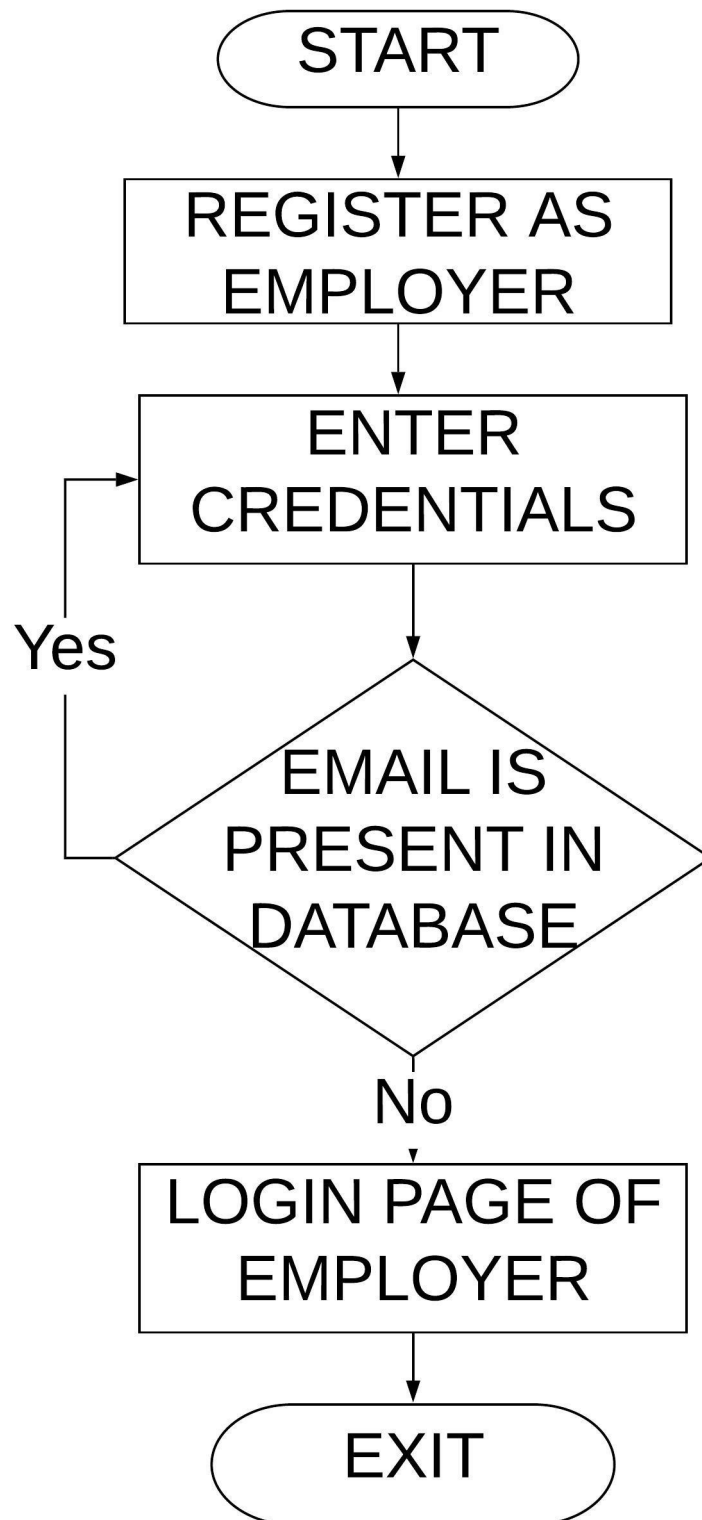

1. TBD
